PROJECTS

Online Courier Service System/Website

📅 06/2023 - 06/2023

A group project aimed at streamlining the courier service process

- Developed a dynamic web application for a courier service, enabling booking and tracking of parcels
- Implemented secure user authentication, live shipment tracking, and an admin dashboard
- Used a MySQL database for efficient backend data management

Breast Cancer Detection Software

📅 07/2024 - 09/2024

A project focused on assisting in the early diagnosis of breast cancer

- Created a machine learning-driven application for early breast cancer detection
- Utilized Scikit-learn, Pandas, and NumPy for data processing and classification
- Built a user-friendly GUI with Tkinter for users to input test data and receive predictions
